SUMMARY: I am a Senior Software Engineer with 5 years of experience in backend / distributed systems studying part-time for a masters in computer science specializing in Machine Learning at Georgia Tech. My experience in industry and developing frameworks / tools has led me to a deep appreciation of the power of abstraction in software systems. Through my master's program, I learned the foundations of deep learning and the techniques behind state-of-the-art AI models. I am looking to combine my experiences to develop frameworks and tooling within the Machine Learning domain with great abstractions and optimized performance.
